MULTIFAMILY

Q2 2026

United States

Multifamily fundamentals continued to rebalance as easing supply pressures and improving occupancy lifted quarterly rent growth. This transition is widening the performance gap between markets, reshaping opportunities and near-term risks through the second half of 2026.

U.S. Multifamily Recovery Takes Hold

The U.S. multifamily market gained additional momentum during the second quarter as stronger renter demand helped absorb a significant volume of new supply. Net absorption more than doubled deliveries, lifting occupancy and reinforcing signs that the sector is moving beyond the most challenging phase of the recent supply cycle. Although operating performance remains uneven across markets, national fundamentals are improving as demand continues to outpace expectations and supply pressures gradually moderate.

Demand remains supported by the widening affordability gap between renting and homeownership. Elevated home prices and mortgage rates continue to keep many households in the renter pool longer, supporting absorption even as economic growth moderates. At the same time, tighter financing conditions, elevated construction costs, and ongoing capital constraints are contributing to a smaller development pipeline. The resulting slowdown should reduce future supply pressures and help restore pricing power across many markets.

The enactment of the 21st Century ROAD to Housing Act may further support the long-term outlook by encouraging housing production, streamlining portions of the entitlement and environmental review processes, expanding affordable housing funding tools, and modernizing certain FHA multifamily lending programs. While implementation will take time and many provisions require agency guidance, this legislation represents a positive step toward improving housing supply and broadening access to capital for multifamily development.

MARKET TRENDS

- **Occupancy continued to recover** across the national market, supported by absorption that exceeded deliveries by a wide margin across the national market.
- **Demand significantly outpaced new supply**, improving market balance after an extended period of elevated deliveries.
- **Development activity remains constrained**, reducing future supply risk and supporting longer-term fundamentals.
- **Rent growth stabilized nationally**, though performance remains highly dependent on local supply conditions.
- **Refinancing challenges continue to create selective investment opportunities** despite improving property fundamentals.

OCCUPANCY & RENT GROWTH

Source: Colliers, RealPage, MSCI Real Capital Analytics

Occupancy Recovery Gains Momentum

National occupancy improved in Q2 2026, rising to 95.6% as stronger leasing activity helped tighten market conditions. This gain reflects meaningful progress from the prior quarter and suggests the market is moving beyond the most acute phase of delivery-driven softness. While occupancy remains below the peak levels reached earlier in the expansion, the second-quarter increase reflects healthier leasing velocity and broader improvement in market balance as new supply is absorbed more efficiently.

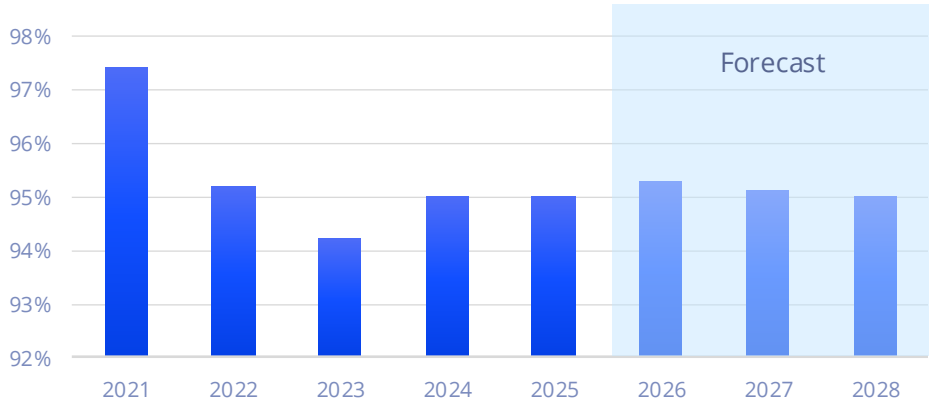

Market-level divergence remains pronounced. Supply-constrained coastal and Midwest markets continue to maintain some of the strongest occupancy positions, supported by limited new construction and steadier demand. In contrast, several high-growth Sun Belt markets are still absorbing large volumes of recently delivered product, keeping lease-up competition elevated and limiting near-term pricing power. However, occupancy trends improved during the quarter in many higher-supply markets, suggesting demand is beginning to catch up with the recent wave of new inventory.

As construction activity continues to moderate, the occupancy outlook is becoming more constructive. The national under-construction pipeline remains sizable at nearly 500,000 units, but development activity has pulled back from prior peaks, offering greater visibility into future supply. If demand remains resilient, occupancy should continue to firm gradually through the remainder of 2026, with the greatest improvement likely in markets where new supply is already tapering and existing inventory has largely worked through lease-up pressure.

Demand Continues to Outpace Supply

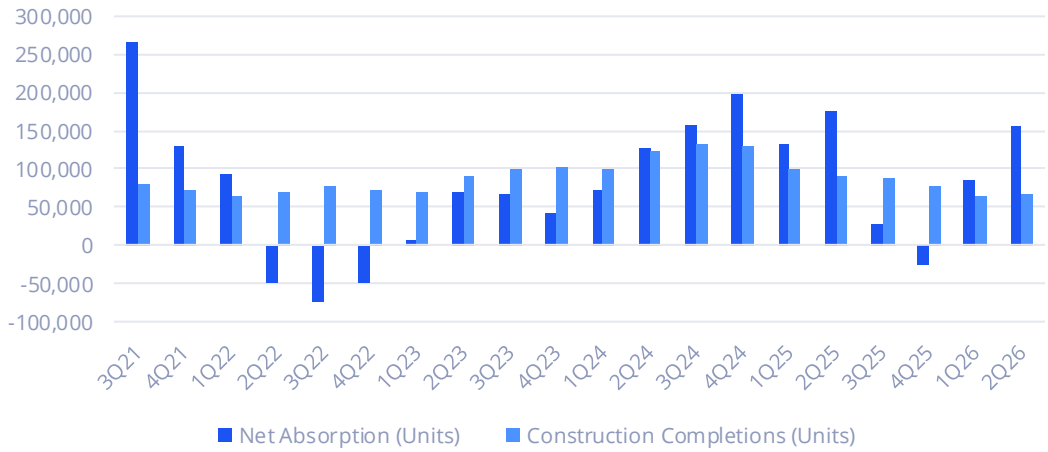

Multifamily demand strengthened in Q2 2026, with net absorption totaling 152,856 units, more than double the 67,268 units delivered during the quarter. That momentum helped push occupancy higher and reinforced the resilience of renter demand despite slower economic growth and elevated borrowing costs. Structural affordability constraints in the for-sale housing market remain supportive of leasing activity, as high home prices, elevated mortgage rates, and limited ownership options keep many households in the rental pool longer.

While demand remains below the extraordinary levels reached during the post-pandemic surge, the second quarter marked an important step toward a healthier supply-demand balance. Absorption was strong enough to offset new deliveries nationwide, suggesting that recent supply pressures are becoming more manageable. That progress is especially notable given the still-elevated development pipeline, though performance remains uneven across markets.

Markets with significant recent construction continue to face longer lease-up timelines and more competitive conditions, while supply-constrained coastal and Midwest markets are benefiting from steadier demand and limited new inventory. As development activity slows and fewer projects move through the pipeline, sustained absorption should help further stabilize occupancy and support a gradual recovery in rent growth through the remainder of 2026.

Net Absorption and New Supply Returning to Equilibrium

2.3X

Demand-to-Supply Ratio

Apartment demand was more than double new deliveries in Q2 2026.

Supply Pressures Peak as the Pipeline Thins

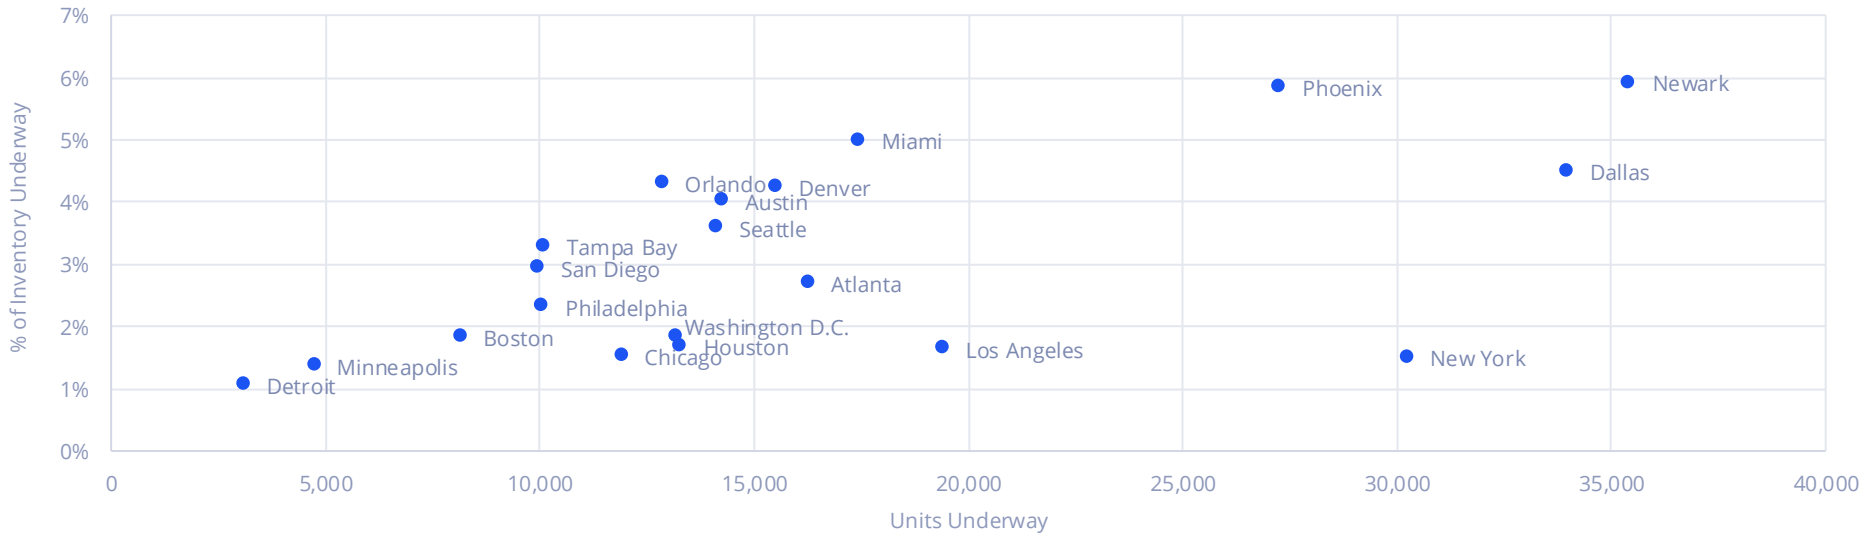

498,090 Units Under Construction

The multifamily development pipeline continues to moderate from recent cycle highs.

Although deliveries remained elevated, the development cycle continues to normalize. More than 67,000 units were delivered during the quarter, but new development activity remains constrained by financing challenges, construction costs and higher capital requirements. These conditions continue to reduce future supply additions and shrink the active development pipeline.

With nearly 500,000 units under construction nationally, supply remains a near-term consideration, particularly in several Sun Belt markets like Dallas and Phoenix. However, construction starts have slowed materially from peak levels, improving visibility into future inventory growth and creating a more favorable backdrop for occupancy and rent performance over the next several years.

Rent Growth Diverges Across Markets

National rent growth remained relatively muted during the quarter, with average effective rents reaching approximately $1,970 per month. While annual growth remains limited, quarterly performance improved as stronger demand and rising occupancy helped stabilize pricing across many markets. This improvement suggests the market is gradually moving beyond the most challenging phase of the recent supply cycle, although pricing power remains constrained in several high-delivery metros.

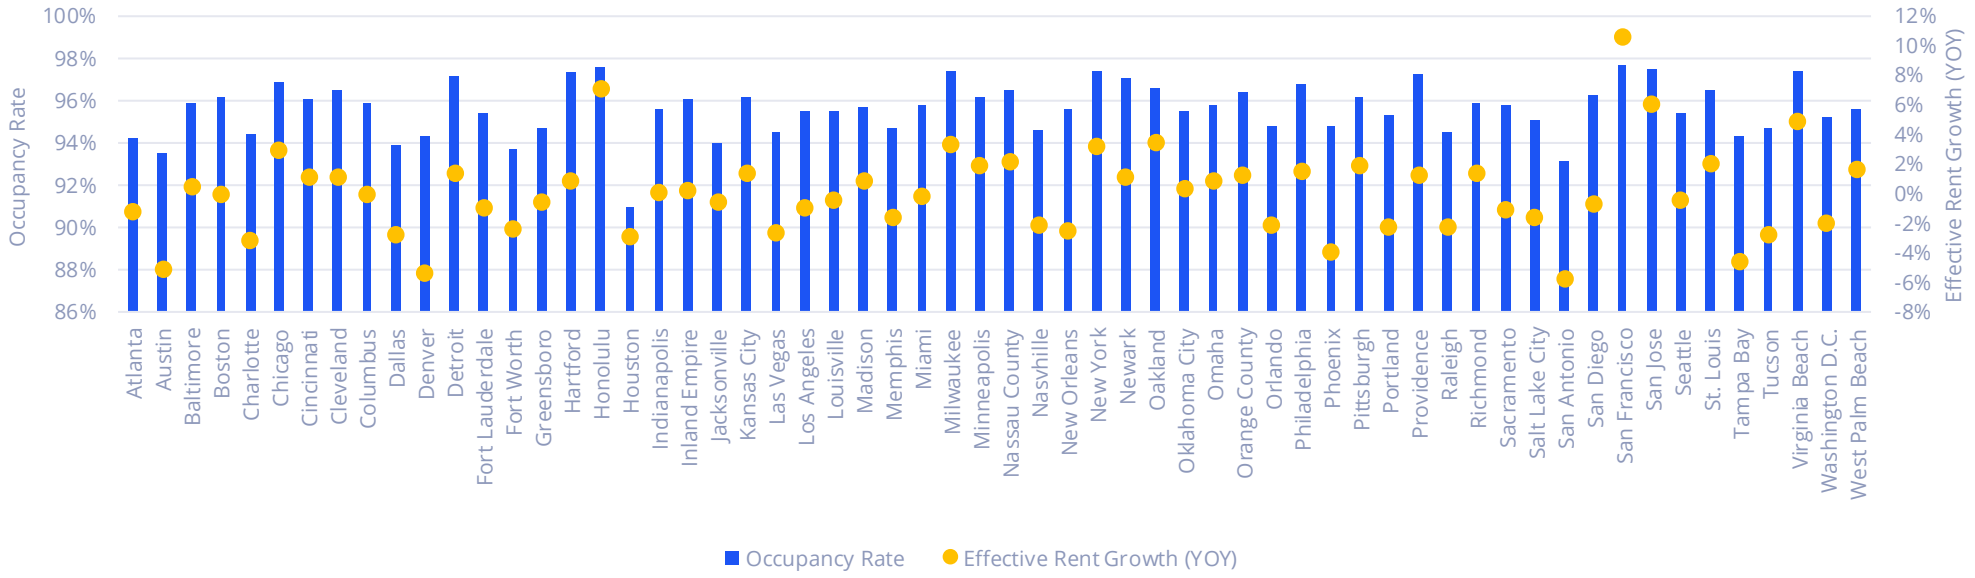

Rent performance continues to vary by market. Areas with limited new supply and stronger occupancy generally reported healthier rent growth, while high-delivery markets still face competitive leasing conditions and elevated concession activity. In many Sun Belt markets, landlords remain focused on occupancy and leasing velocity, limiting rent increases.

As supply pressures ease and construction activity slows, the outlook for rent growth is improving. Markets that have largely absorbed recent inventory additions are already showing greater pricing stability, while higher-supply markets are expected to recover more gradually. Stronger demand fundamentals and a shrinking development pipeline should support a healthier pricing environment through late 2026 and into 2027.

Positive rent growth in 29 of 60 markets points to a selective recovery.

Stronger Leasing Conditions Lift Rent Growth

Source: Colliers, RealPage

Capital Markets Activity Continues to Improve

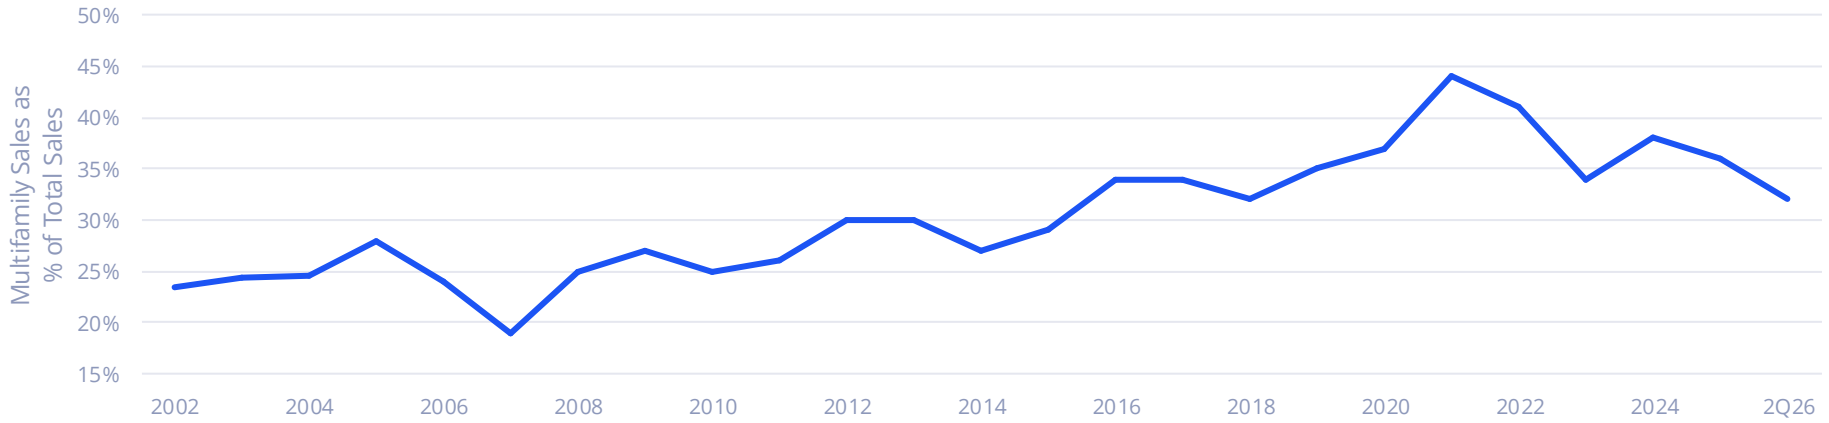

Multifamily investment activity continued to recover in 2026 as investors grew more confident in the sector's operating outlook and pricing expectations came into closer alignment. Quarterly sales volume across the top 60 markets reached approximately $22.8 billion, a modest year-over-year decline, yet the trailing four-quarter average now sits above the average for the prior four quarters. Improving fundamentals, stronger demand, and clearer visibility into future supply have drawn more buyers back to the market, particularly for stabilized assets with durable cash flows.

While transaction activity has improved, investors remain highly selective. Assets located in markets where supply pressures are easing and occupancy trends are strengthening continue to attract the strongest interest. In contrast, properties facing significant lease-up risk, elevated concession pressure, or near-term refinancing needs often require wider bid-ask spreads and more conservative underwriting assumptions. As a result, pricing recovery remains uneven across markets and asset classes.

Capital availability has improved relative to recent quarters. Agency lenders remain active participants in the multifamily market, while banks, debt funds, and other institutional lenders have gradually increased lending activity as conditions stabilize. Although financing costs remain elevated by historical standards, improved debt availability has helped facilitate transactions and support investor confidence. Many buyers continue to focus on basis and long-term income growth rather than near-term appreciation.

Investor interest increasingly centers on markets where improving demand and a slowing construction pipeline are expected to support future rent growth. Many buyers view the current environment as an opportunity to acquire assets before fundamentals fully recover, particularly in markets that have already absorbed much of the recent supply wave. As occupancy rises and development activity moderates, transaction volume is expected to remain healthy through the remainder of 2026, supported by strengthening property fundamentals and growing confidence in the sector's outlook.

Multifamily Retains Its Appeal Amid Disciplined Capital

Source: Colliers, MSCI

Distress Emerges Gradually

+461 BPS

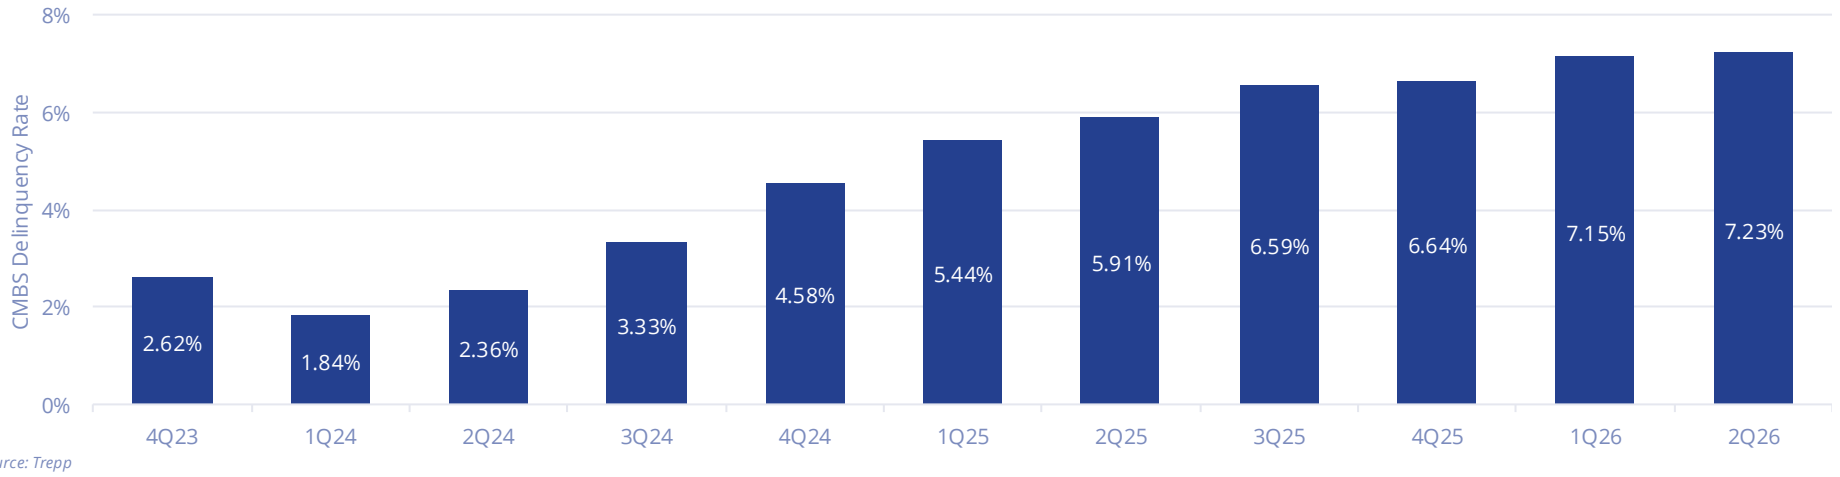

Increase Since Q4 2023

Distress within the multifamily sector continues to rise, though it remains concentrated in specific assets and markets rather than reflecting broad deterioration in fundamentals. Much of the pressure stems from refinancing challenges, as assets financed during the low-interest-rate environment contend with higher borrowing costs, tighter underwriting standards and slower rent growth.

Properties with floating-rate debt, near-term loan maturities or aggressive underwriting assumptions remain the most vulnerable. Assets in markets experiencing elevated supply additions are also facing greater pressure as concessions and longer lease-up periods weigh on cash flow. Despite these challenges, many owners have successfully navigated the environment through recapitalizations and loan modifications.

At the same time, current conditions are creating opportunities for well-capitalized investors. Much of today's distress is tied to capital structure rather than property performance, allowing buyers to acquire assets with solid long-term fundamentals at more attractive pricing. While distress levels are likely to remain elevated through the remainder of 2026, healthy occupancy, resilient demand and a moderating supply pipeline should help limit broader market disruption.

CMBS Delinquencies Are on the Rise

Source: Trepp

The Road Ahead

The multifamily sector enters the second half of 2026 on stronger footing as demand continues to outpace supply and occupancy trends improve. Strong absorption has helped offset elevated deliveries, allowing fundamentals to stabilize more quickly than many anticipated earlier in the cycle. While conditions remain uneven across markets, the combination of resilient renter demand and a moderating construction pipeline is creating a more favorable operating environment.

Supply conditions should continue to improve over the coming quarters. Although the under-construction pipeline remains elevated, development activity has slowed meaningfully as financing costs, construction expenses, and capital constraints limit new projects. As fewer units enter the pipeline, many markets should experience less lease-up pressure, supporting occupancy and rent growth.

Capital markets are also showing signs of stabilization. Transaction activity has improved, lenders remain active, and investors are growing more comfortable underwriting multifamily opportunities as fundamentals recover. While refinancing challenges and elevated distress will persist in select markets, improving demand and a slowing supply pipeline should support continued recovery through the remainder of 2026. Multifamily remains well-positioned to benefit from long-term housing affordability challenges and favorable demographic trends.

Looking Ahead

Improving demand, moderating supply and stabilizing capital markets are creating a more constructive backdrop for multifamily fundamentals heading into 2027.

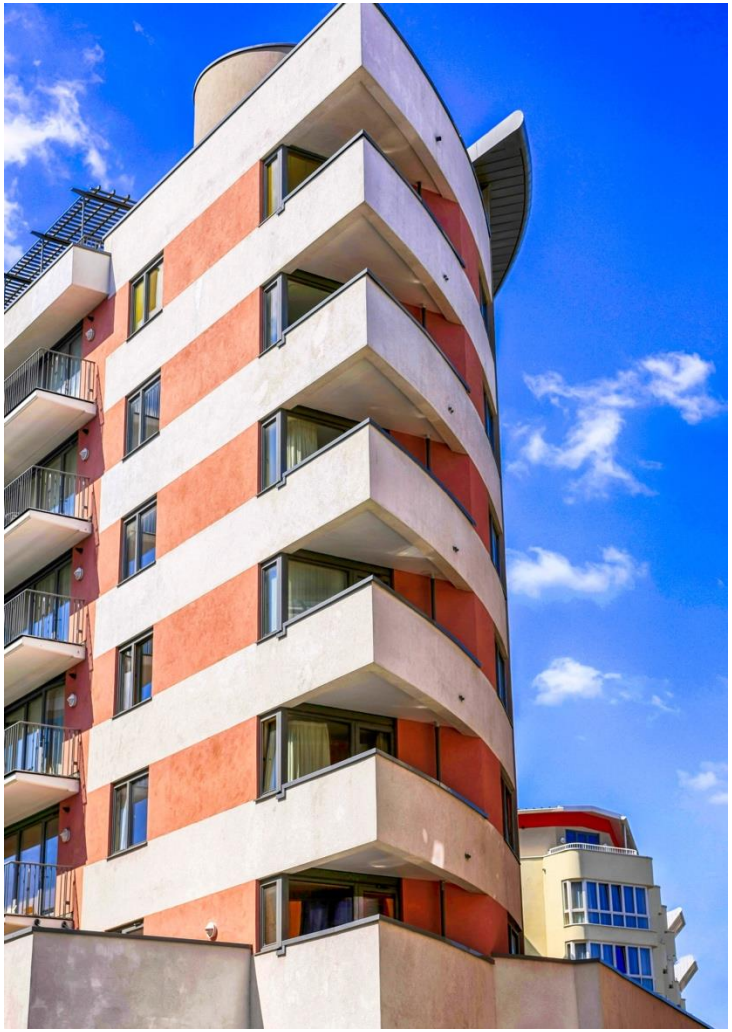

- **Demand remains resilient**, supported by ongoing housing affordability challenges that favor renting over homeownership.
- **Occupancy and rent growth are expected to see moderate improvement**, as absorption continues to outpace new supply across much of the market.
- **Supply pressures are easing**, with construction activity slowing and the development pipeline shrinking from recent peaks.
- **Capital markets continue to recover,** supported by improving fundamentals, active lenders and renewed investor confidence.

Q2 Spotlight

Affordable Housing

Q2 2026 Spotlight: U.S. Affordable Housing

The U.S. affordable housing market stands at a pivotal moment in 2026. Rising home prices, elevated borrowing costs, and rent growth that has outpaced wages have widened the gap between household income and housing costs, keeping more people renting for longer and fueling demand for income-restricted and workforce housing.

That pressure has reached record levels. According to the Harvard Joint Center for Housing Studies' America's Rental Housing 2024, about half of all U.S. renter households are now cost-burdened. Roughly 26%, or some 12 million households, are severely cost-burdened, spending more than half their income on housing. These strains fall hardest on lower-income renters, underscoring the depth of unmet need.

Supply, however, is struggling to keep pace. New affordable deliveries recently reached a cyclical high, driven by expanded public funding and years of federal, state, and local efforts to address the nation's housing shortage. Even so, the same headwinds facing the broader multifamily sector, including elevated construction costs and higher interest rates, are making new development increasingly difficult.

Still, affordable housing remains one of the most resilient multifamily subsectors. Durable demand fundamentals, along with growing focus among developers, investors, and policymakers on preserving and expanding the nation's affordable inventory, continue to support the segment.

26% of renters are severely cost-burdened, spending more than half their income on housing.

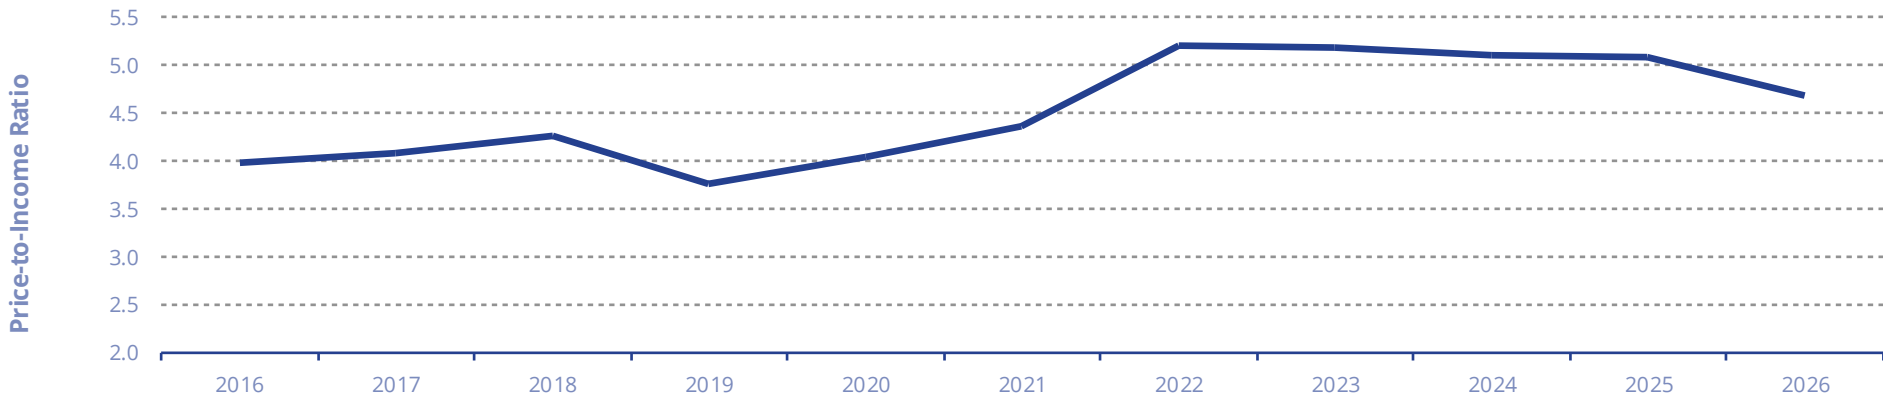

Affordability Gap Fuels Demand

Barriers to homeownership and the growing number of cost-burdened renters have expanded the pool of households eligible for affordable housing. Although it declined over the past year, the median U.S. single-family home sale price ballooned by 34.5% over the past 10 years to $403,200, outpacing median household income growth of 13.9%. As a result, the median home price-to-income ratio increased to 4.7, meaning a typical home costs nearly five times the median annual income.

Home price-to-income ratios are significantly elevated in high-cost markets like San Jose (11.3), Los Angeles (10.5), San Francisco (9.8), and Miami (7.6). As a result, many would-be first-time buyers are delaying homeownership and opting to rent. At the same time, nearly half of all renters spend more than 30% of their income on housing, while 26% are severely cost-burdened. In addition to these affordability challenges, a wave of Americans entering retirement on fixed incomes and persistent job growth in low-wage service sectors are expected to sustain long-term demand for affordable housing.

Home Price-to-Income Ratio

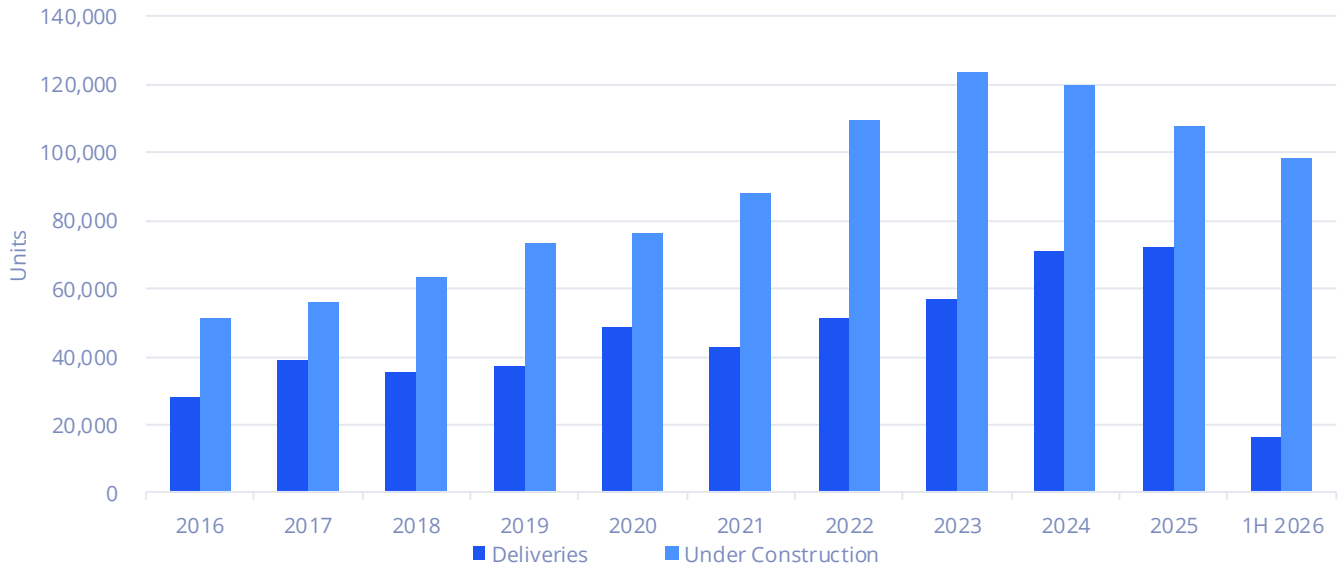

Source: U.S. Census Bureau, U.S. Department of Housing and Urban Development

Barriers to New Supply and Preservation Challenges

Despite historically strong demand, supply has become increasingly constrained. Fully affordable deliveries reached a cyclical high of 72,476 units in 2025 before decelerating in the first half of 2026. The construction pipeline peaked at over 123,000 units under construction during 2023 and has since declined by 20% to its lowest level since 2021.

Affordable housing developers are facing the same pressures affecting market-rate housing, including lengthy entitlement processes, zoning restrictions, and rising construction and operating costs, which have outpaced public funding for new projects. At the same time, the existing low-rent housing inventory is shrinking. Adjusted for inflation, the number of units renting below $1,000 per month fell by more than 30% between 2014 and 2024, representing a loss of more than 7 million low-rent units. Over the same period, the supply of units renting above $2,000 per month grew substantially. That erosion is likely to continue. Rent restrictions on as many as 845,000 units financed by the Low-Income Housing Tax Credit (LIHTC) are set to expire by 2035. Unless these properties are recapitalized with new subsidies or financing, owners can convert them to market-rate, significantly increasing rents and displacing existing tenants.

Fully Affordable Deliveries and Units Under Construction

Source: CoStar

845,000

LIHTC-financed affordable housing units could reach the end of their rent restrictions by 2035.

Policy Response

Policy measures are being enacted at the federal, state, and local levels to preserve existing units, fund new development, and address the affordable housing shortage. The Low-Income Housing Tax Credit is being permanently expanded this year through increased credit allocations and a lower private activity bond financing threshold. These changes could lead to the development of more than 1 million new affordable units over the next 10 years.

The 21st Century ROAD to Housing Act, which became law in July 2026, will also help remove some barriers to new development. Key provisions include funding for local governments that add new housing through zoning reform or streamlined permitting, higher FHA multifamily loan limits, and direct use of Community Development Block Grant funds for new affordable housing construction.

Reforms across many states and municipalities are already underway to address the supply shortage. Many states are adopting or expanding their own versions of the federal Low-Income Housing Tax Credit program, including Michigan, Maine, and California. Others are targeting development barriers more directly. Texas enacted a statewide reform last year allowing apartments to be built in commercial zones, while a Georgia law passed in May requires counties and municipalities to follow strict review timelines to speed up development. Earlier this year, New York City launched a $4 billion initiative to produce affordable housing and preserve existing units. While these measures represent meaningful progress, significant hurdles to new development remain. The coming years will test how effectively these policies can narrow the gap between supply and demand.

Capital Markets

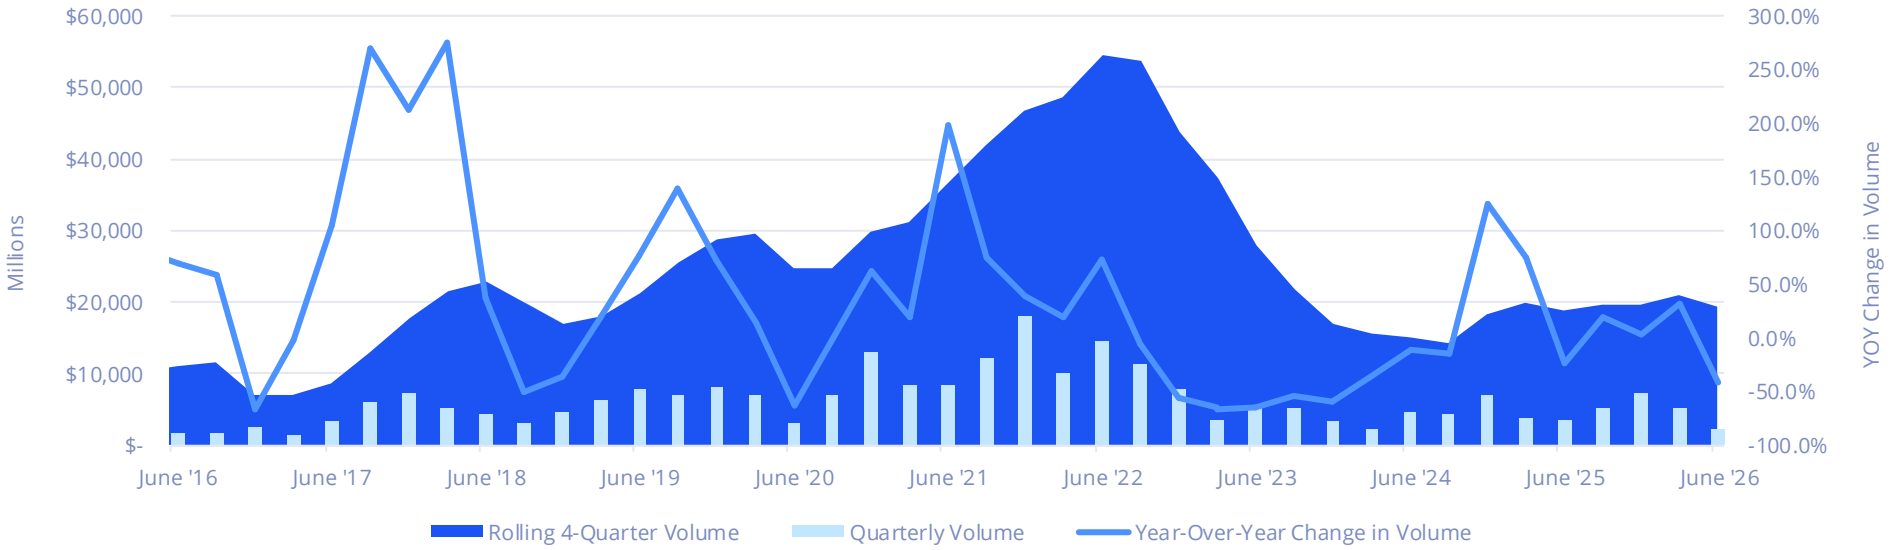

Capital continues to flow into the affordable housing sector, although investors are underwriting opportunities more selectively as financing costs, construction expenses, and subsidy complexity remain elevated. Despite a notable drop-off during the second quarter, when sales volume totaled just over $2 billion, trailing four-quarter sales volume remains up 4% year-over-year at $19.5 billion.

Private capital remains the dominant driver of investment activity, with net acquisitions totaling more than $600 million year-to-date. Institutional players, including Cortland and Brookfield, also remain active buyers.

While financing has become more complex, investor appetite for stabilized affordable housing assets remains strong, particularly for well-located properties with long-term rent restrictions.

Looking ahead, capital markets activity should remain resilient, but execution will depend on debt availability, tax credit pricing, and the ability to assemble increasingly complex capital stacks. Preservation opportunities may also become more important as more LIHTC properties approach rent-restriction expirations.

Affordable Housing Sales Volume

Source: MSCI

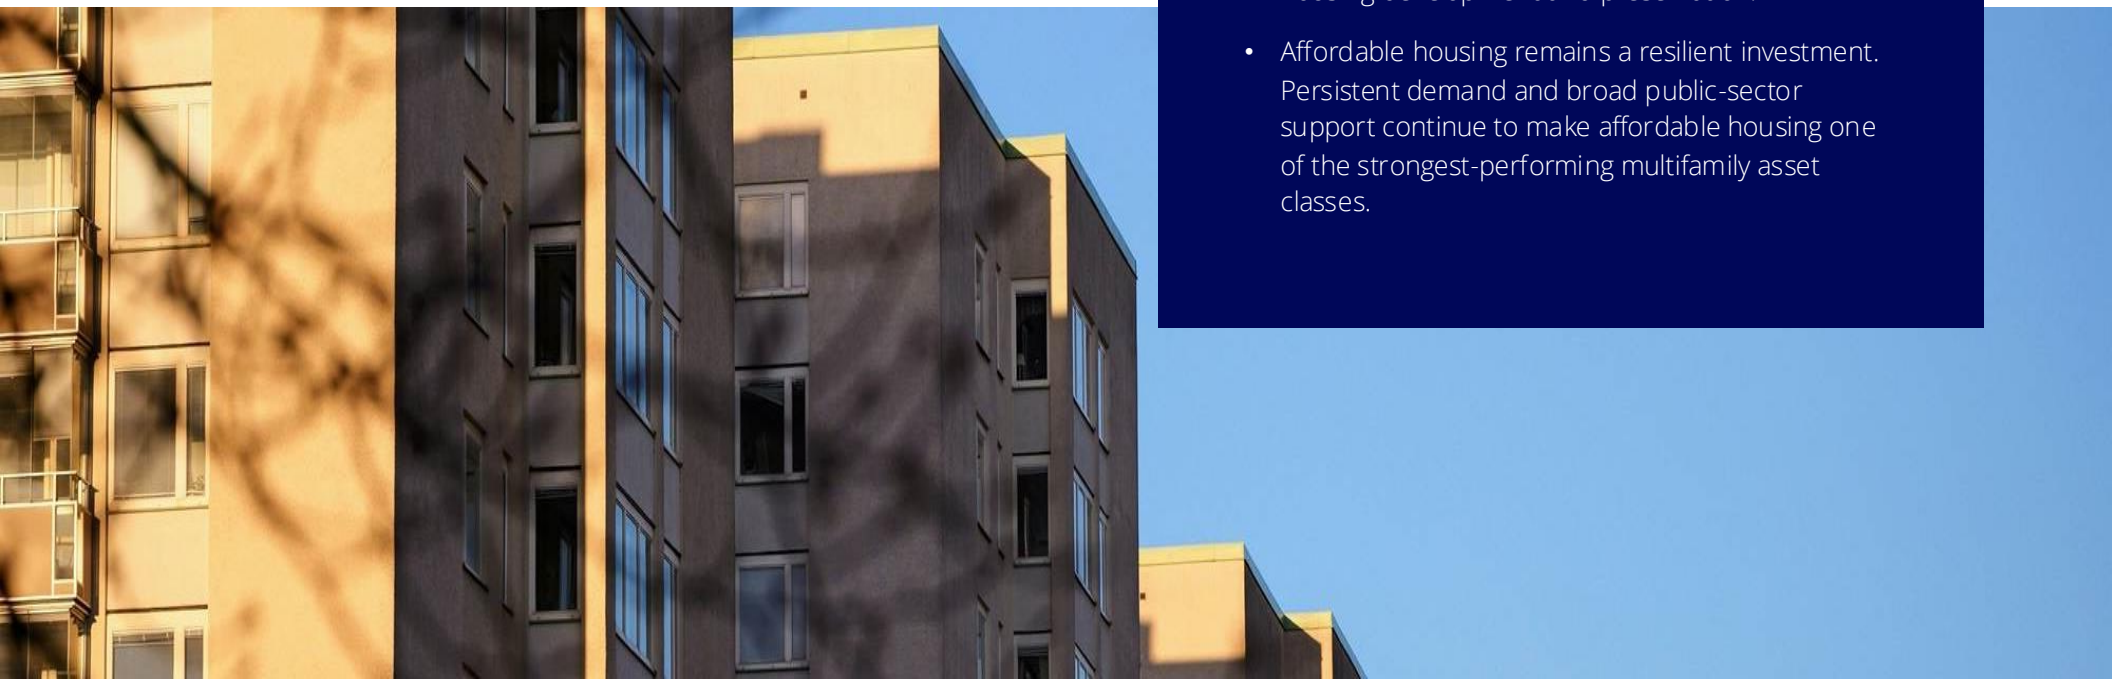

Affordable Housing Outlook

The long-term outlook for the sector remains favorable as demographic trends and persistent affordability challenges continue to drive renter demand. While significant regulatory and financing hurdles will keep supply below demand in the near term, recent federal legislation and a wave of state- and city-level reforms should gradually expand the development pipeline.

Preserving the existing stock will be equally important, with rent restrictions expiring on tens of thousands of units each year. Public-sector support and resilient fundamentals should drive strong investment activity and reinforce affordable housing's position as a standout segment of the multifamily market.

Key Takeaways

- Demand continues to outstrip supply. Rising home prices, elevated mortgage rates and a growing share of cost-burdened renters are driving greater need for affordable housing nationwide.
- Development is slowing despite strong fundamentals. Higher construction costs, elevated interest rates and more complex financing structures are reducing new affordable housing production after a record delivery cycle.
- Public policy is expanding support for the sector. Federal LIHTC enhancements and a growing number of state and local housing reforms are improving the long-term outlook for affordable housing development and preservation.
- Affordable housing remains a resilient investment. Persistent demand and broad public-sector support continue to make affordable housing one of the strongest-performing multifamily asset classes.

MARKET TRENDS

- **Demand strengthened from late-2025 levels**, helping the market absorb more of the recent supply wave and restore balance.
- **Supply pressure is easing**, with the development pipeline continuing to pull back from last year's elevated levels.
- **Occupancy improved into the mid-93% range**, signaling that leasing conditions are stabilizing after a prolonged period of delivery-driven softness.
- **Rent declines are beginning to moderate** as stronger absorption reduces some of the pricing pressure from recent lease-up competition.
- **Investment sentiment remains focused on recovery potential**, with buyers watching for signs that operating conditions have moved past the cycle's low.

UNITS UNDER CONSTRUCTION
11.8K ▲ YOY ▼ Forecast

QUARTERLY SALES VOLUME
$1,104M ▲ YOY ▲ Forecast

MARKET TRENDS

- **Limited new supply continues to support fundamentals**, keeping Chicago among the most balanced major apartment markets nationally.
- **Occupancy remained near 97% in Q2 2026**, reinforcing the market's relative strength compared with higher-supply Sun Belt metros.
- **Rent growth held positive**, supported by steady leasing demand and minimal competitive pressure from new deliveries.
- **Development activity remains measured**, helping preserve pricing power even as broader economic growth moderates.
- **Capital continues to favor Chicago's stability**, with investors drawn to durable cash flows and comparatively limited supply risk.

HISTORICAL COMPARISON

QUARTERLY SALES VOLUME
$981M ▼ YOY ▲ Forecast

MARKET TRENDS

- **Demand remained strong through midyear**, allowing Dallas to absorb a large share of the region's recent construction wave.
- **The market is still working through elevated supply**, with one of the largest development pipelines among the featured metros.
- **Occupancy continued to recover from late-2025 softness**, supported by stronger leasing activity and ongoing household growth.
- **Rent growth remains constrained** as newly delivered properties continue to compete aggressively for residents.
- **Long-term fundamentals remain compelling**, supported by continued business expansion, migration, and household formation across North Texas.

UNITS UNDER CONSTRUCTION
9.3K ▼ YOY ▼ Forecast

QUARTERLY SALES VOLUME
$273M ▼ YOY ▲ Forecast

MARKET TRENDS

- **Leasing momentum strengthened from late-2025 levels**, helping the market regain its footing after several quarters of supply-related pressure.
- **Demand continued to outpace new supply in early 2026**, helping tighten availability across the metro.
- **The construction cycle is beginning to normalize**, reducing future supply risk as the pipeline falls below last year's elevated levels.
- **Rent performance remains soft**, though stronger leasing conditions suggest pricing pressure is beginning to ease.
- **Population and employment growth continue to support the outlook**, reinforcing Fort Worth's long-term demand profile.

MARKET TRENDS

- **Demand rebounded sharply during the quarter**, helping Houston work through recent deliveries more quickly than earlier in the cycle.
- **Absorption exceeded new supply in Q2**, improving market balance after a softer start to the year.
- **Development activity is starting to moderate**, providing more clarity around future inventory growth.
- **Rent performance remains under pressure**, reflecting continued competition among newly delivered properties.
- **Investor interest is improving selectively**, supported by resilient demand fundamentals and a more constructive supply outlook.

MARKET TRENDS

- **Market fundamentals remain healthy**, supported by steady renter demand and relatively balanced supply.
- **Occupancy held in the mid-96% range**, underscoring Kansas City's relative stability versus many higher-growth markets.
- **Rent growth stayed positive**, reflecting consistent leasing demand and manageable competitive pressure.
- **New development remains active but manageable**, with demand continuing to match supply across most of the metro area.
- **Investor interest is holding steady**, supported by affordability, stable operations, and attractive risk-adjusted yields.

MARKET TRENDS

- **Demand remains resilient**, supporting healthy occupancy despite inventory growth.
- **Development activity continues to be elevated for the market's size**, keeping near-term lease-up pressure in place across select submarkets.
- **Rent growth stayed positive in Q2 2026**, supported by stable economic drivers and persistent housing affordability pressures.
- **Occupancy is normalizing from prior-cycle highs**, but market conditions remain fundamentally sound.
- **Long-term prospects remain favorable**, driven by growth in education, government, and technology-related employment.

QUARTERLY SALES VOLUME
$325M ▼ YOY — Forecast

MARKET TRENDS

- **Demand strengthened meaningfully in Q2**, helping tighten market conditions after a slower late-2025 period.
- **Absorption significantly outpaced new supply**, reinforcing the market's improving supply-demand balance.
- **Rent growth held positive**, supported by stable leasing conditions and relatively limited competitive pressure.
- **Development activity remains modest compared with many peer markets**, reducing the risk of renewed supply-driven softness.
- **Durable cash flows and balanced fundamentals** continue to attract capital.

HISTORICAL COMPARISON

	Q2 2026	Q1 2026	Q2 2025

MARKET TRENDS

- **Fundamentals are exceptionally tight**, supported by deep renter demand and limited near-term competitive supply.
- **Occupancy held in the upper-97% range**, reflecting the market's durable demand base and high barriers to entry.
- **Rent growth stayed positive** as limited availability and elevated housing costs continued to support pricing power.
- **New development is constrained relative to market size**, helping preserve long-term operating stability.
- **Investor interest is selective but durable**, with capital remaining focused on scale, liquidity, and long-term income growth.

MARKET TRENDS

- **Demand is recovering from late-2025 levels**, absorbing more recent deliveries.
- **Supply remains the dominant near-term theme**, with the market still working through one of the larger construction pipelines nationally.
- **Occupancy is gradually stabilizing**, suggesting supply-demand conditions are moving in a more constructive direction.
- **Rent growth remains under pressure** as concessions and competition among newer properties continue to limit pricing power.
- **Investor sentiment is improving selectively**, with long-term growth prospects keeping Phoenix on the radar despite near-term operating pressure.

MARKET TRENDS

- **Demand strengthened during the quarter**, helping absorb new supply and improve market balance.
- **Absorption meaningfully exceeded deliveries in Q2**, easing some of the pressure created by recent inventory growth.
- **Occupancy is trending higher**, supported by healthy renter demand and a resilient employment base.
- **Rent performance is stabilizing** as stronger leasing activity offsets competitive pressure in higher-supply submarkets.
- **Investor interest remains tied to long-term growth**, with capital focused on durable income and the market's technology-driven demand base.
